

LOCATION:        WW-1-452

HYDRAULIC CONDITIONS:    Apparent Artesian

PERTINENT OBSERVATIONS:

Overnight recovery allowed at total depth of 388', no water detected. Water detected at ~ 450' while drilling 388'-488'. Static in open borehole = 383.3' (below grade) at total depth = 488'.

Geophysical logs show numerous high density and clay and/or silt intervals from 370' to TD. Some of these intervals could create the confining conditions observed in this well.
